

Nevada System of Higher Education

**Nevada NASA Space Grant Consortium
Travel Support to NASA Centers
Request for Information**

Deadline: Open

The Nevada NASA Space Grant Consortium has received funding from Congress and the National Aeronautics and Space Administration to promote and support participation of faculty and students in Aerospace related scientific research and training. As part of this funding the Nevada NASA Space Grant Program has resources to support undergraduate or graduate students and faculty to travel to NASA Centers located across the United States during the fall semester of 2009. This support serves as a means of developing new relationships, improving and strengthening existing collaborations between Nevada faculty and scientists at NASA centers, and educating students to fulfill the nation's need for science, mathematics, engineering and technology skills. Interested parties need to contact the Nevada Space Grant Office or the NSHE EPSCoR office to learn more about the availability, the proposal process, eligibility requirements and general restrictions.
