Assignment 2 – Designing Your Classroom

For this assignment, you will be using the draw tools in MSWord to design your classroom. Your classroom will be equipped with computers and other technologies.

Things to consider:

1. How many computers will be in your classroom?
2. Where will the computers be located?
3. Where will the chalkboard/white board be located?
4. How many students will be in your class?
5. Where will the teacher’s desk be located?

Your Classroom Space

Begin your project, by thinking about your classroom environment. How would you present your concept to an architect? You probably have a space with some straight walls, some angled walls, a doorway and a bunch of furniture. Most of those shapes are regular geometric figures that can be depicted using drawing tools. Desks are usually squares or rectangles, book shelves are rectangular, and garbage cans are usually circles. These shapes can be redrawn easily using your drawing tools in a way that gives others a bird’s eye view of your space.

Instead of using geometric shapes, you can be creative by using the clipart to create a more visual effect for your classroom.

Evaluation Criteria

Your classroom design must include the following:

- Title of your classroom
- Technology
- Teachers Desk
- Clipart
- Color
- Wordart
Entrance to the classroom
Textbox
Geometric Objects (or other objects selected from the draw tool/shapes function)
All items/objects must be labeled, even if it is obvious 😊
Identify the numbers of students in your classroom
A paragraph that discusses the rationale for your classroom design.

You may use the following tips to design your classroom layout.

Tip #1 Select a draw tool to draw the entire perimeter of your room first. Change the line size to 8 pt. to make the outside walls thick enough to hold windows, if you are lucky enough to have them in your own classroom. You will use other drawing tools to fill the interior space with furniture and other objects that you see in your classroom.

Tip #2 Select page color and then fill effects to change the look of your objects.

Tip #3 Use the textbox or wordart tool to label the fixtures or furniture in your room.
